

Town Center

Nighttime Maintenance Planned

Project Description: Rockville's aggressive Sewer Preventative maintenance program proactively flushes sewer mains in order to avoid backups. These backups are frequently related to improper disposal of oil and grease down the drain from residential and commercial properties.

The City will be flushing the sewers in Town Square and downtown Rockville. The work will be performed after hours (10 p.m. – 6 a.m.) to avoid traffic congestion and delays.

The work will be temporary at any given location and residents can expect the use of bright lights and some vehicle noise.

We apologize for any inconvenience this work causes you.

Purpose: To proactively flush high volume sewer mains where backups are most likely to occur.

Location: Town Center/Downtown

Timeline: Work is scheduled for April 15 thru 26. If needed because of weather or other anticipated delays, the maintenance may also be performed during the following week.
